**Section**: B<sub>(2)</sub> University of Asia Pacific

#### Matrimony Project (Sample Scenario)

The Matrimony project (website) is a webbased software system. This software is an useful tool to find life partners for people.

**Purpose:** The core purpose of this website project is to find perfect matches. Here, users can upload their biodata to find a suitable match for them. They can also search for their desired person through an optimized search option.

On this website we have to cover different sections to meet various requirements. These are:

Log In Interface: Existing users have to "Log In" using their username, email ID/phone number

& password. Also they can continue browsing by log in using facebook/google/apple id.

Password		
Remember	Me	
	Log In	

Fig. 01: Sample log in Interface

New users can use the "Sign Up" option to register for a new account by providing some personal information and a phone number or email verification. For security purpose, they have to verify using 1. OTP Verification 2. Captcha (I'm not a robot)

Creating Biodata: After a successful log in, an user can create their own biodata by providing detail information. This includes personal

## <u>information</u>, <u>family information</u>, <u>educational</u> <u>qualifications</u>, <u>address</u>, <u>contact details</u> etc.

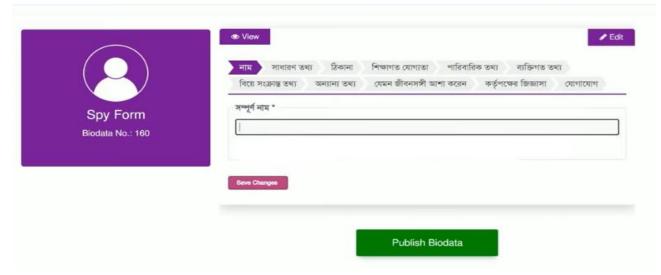

Fig. 02: Sample biodata form Interface

After successfully giving the requested information, the user has to agree to the *terms* and conditions to complete his/her biodata.

*Terms and conditions* include:

- Introduction.
- Right to make changes to the agreement.
- User guidelines. (rules, restrictions, requirements)
- Copyright and intellectual property information.

- Governing law.
- Privacy information.
- Limitation of liability

Searching Biodata: To search for biodata, users can search by their desired options to get the specific results. This includes options like-searching by gender, marital status, district, and biodata no.
